SN.1/Circ.305
1 February 2012

SAFETY OF NAVIGATION

NORTH AMERICAN ICE SERVICE - ICEBERG INFORMATION AND SERVICES

1 At the request of the Government of the United States, the attached announcement of the North American Ice Service - Iceberg Information and Services - is brought to the attention of Member Governments. This was formerly known as the Announcement of 2011 International Ice Patrol Services (SN.1/Circ.299 refers).

2 Member Governments are requested to bring this information to the attention of shipowners and shipmasters and other parties concerned encouraging them to immediately report any sightings of ice when near or within the "estimated limits of all known ice" and advising them to be guided by the attached announcement.

...

ANNEX

NORTH AMERICAN ICE SERVICE ICEBERG INFORMATION AND SERVICES

The North American Ice Service (NAIS), a partnership comprised of the International Ice Patrol (IIP), the Canadian Ice Service (CIS), and the U.S. National Ice Center (NIC), provides year round maritime safety information on iceberg and sea ice conditions in the vicinity of the Grand Banks of Newfoundland and the east coast of Labrador, Canada. The daily NAIS Iceberg Limit, valid at 0000Z, along with the daily Sea Ice Limit, valid for 1100 EST the previous day, will be distributed as a NAVAREA IV warning in the format of a text Iceberg Bulletin and as a graphic Iceberg Chart in accordance with Table 1.

The purpose of the NAIS Iceberg Bulletin and Chart is to advise mariners of the estimated iceberg extent within the region. On the chart, numbers within each grid sector inside the Iceberg Limit are intended to provide mariners an awareness of the relative density of icebergs. For more information on the Iceberg Bulletin and Iceberg Chart visit <http://www.navcen.uscg.gov/iipCharts>. NAIS reconnaissance is focused near the Grand Banks of Newfoundland and the east coast of Labrador, ice conditions south of Greenland are not monitored by NAIS. (For ice conditions south of Greenland visit the Danish Meteorological Institute's website at <http://www.dmi.dk/dmi/en/gronland/iskort.htm>.) While NAIS strives to be as accurate as possible in reporting the presence of icebergs to mariners, it is not possible to ensure that all icebergs are detected and reported. There is no substitute for due vigilance and prudent seamanship, especially when operating near sea ice and icebergs.

Reports of icebergs in the North Atlantic originate from various sources, including passing ships, reconnaissance flights, and spaceborne reconnaissance. Once position, time, size, and shape of icebergs sighted are received, the data is entered into a computer model that predicts iceberg drift and deterioration. As the time after sighting increases, so does the uncertainty in estimated positions. This uncertainty is taken into account when the Iceberg Limit is determined.

If an iceberg or radar target is detected and reported outside the published NAIS Iceberg Limit, a Notice to Shipping (NOTSHIP) will be sent by the Canadian Coast Guard

Marine Communications and Traffic Service (MCTS) and an urgent NAVAREA IV message will be distributed on SafetyNET via the U.S. National Geospatial-Intelligence Agency (NGA) as the NAVAREA IV Coordinator. These warnings will remain in effect for 24 hours. Iceberg products will be revised shortly after notification between 1200Z and 0000Z or by 1400Z if reported between 0000Z and 1200Z.

Ships are encouraged to immediately report sightings of icebergs or stationary radar targets that may likely be icebergs to the nearest Canadian Coast Guard MCTS Station or through INMARSAT using Service Code 42, as there is no charge when using this code. See Table 2 for MCTS contact information. Vessels participating in a Voluntary Observing Ship (VOS) program should continue to report weather and sea surface temperature (SST) to their respective programs. Vessels interested in providing weather and SST reports to U.S. National Oceanic and Atmospheric Administration's VOS program can contact vos@noaa.gov or visit www.vos.noaa.gov for guidance.

When making iceberg reports, please include **SHIP name** and **CALL SIGN, ZULU TIME, SHIP POSITION** (latitude, longitude), **COURSE, SPEED, VISIBILITY, ICEBERG/RADAR TARGETS POSITION** (Specify either the geographic coordinates or range/bearing from Ship's position), **ZULU TIME OF SIGHTING, METHOD OF DETECTION** (Visual, Radar, or Both), **LENGTH** (in meters), **SHAPE OF ICEBERG** (See Table 3), and **VESSEL CONTACT INFORMATION**.

TABLE 3: ICEBERG SHAPES

Non-Tabular: This general shape category includes blocky, pinnacle, dry dock, wedged, dome, or any iceberg that does not meet characteristics of a tabular iceberg.

Tabular: Flat-topped, most show horizontal banding.
